Observations	10,738	3,946	10,738	3,946
Adjusted R ²	0.390	0.365	0.390	0.368

Note: Entries are coefficients of the controlled direct effect of distance to closest camp on support for the AfD (Columns 1-2) and AfD+NPD (Column 3-4) in 2017, corresponding to Table 4 in HPT. All models report the second stage of the sequential g-estimator (bootstrapped standard errors in parentheses). All models include Weimar state fixed effects (interpolated based on the centroids of contemporary Gemeinden and including Saarland respondents/districts as an additional Weimar state) in *both* stages and contemporary mediators and confounders in the *first* stage regression. *p<0.05; **p<0.01

Table DA.2: The controlled direct effect of camp proximity on support for radical right parties in 2017, with alternative methods to interpolate Weimar states from contemporary Gemeinden (Area interpolation)
